

THE WORLD'S ONLY PREDICTIVE MOTION ANALYTICS SYSTEM

PREVENT COSTLY INJURIES

Baltimore Ravens are using DARI to prevent injuries and keep most valuable players in the game

Client Situation In 2015 the Baltimore Ravens were projected to be one of the best teams in the NFL, but optimism turned to disappointment when injuries stalled the season. With more than 16 athletes on the IR list at one time, the Ravens needed to take action. It became imperative to reduce the injury rate and, in turn, improve the team's chances for winning games.

RAVENS

DARI Solution The Ravens installed the DARI system in the organization's performance facility in order to screen each athlete's biomechanical profile weekly and identify problems before they manifest as pain. Given professional athletes' high-performance focus, players can modify movement patterns to strengthen targeted muscle groups and prevent injury. DARI is the only system able to accurately track these finite motion changes and deliver the data to improve athletes' health.

Business Impact Heading into the 2016–17 season, the Baltimore Ravens' player contracts totaled more than \$150 million. Using DARI to keep athletes on the field is simply a business necessity. The Ravens are expecting similar results from DARI as have already been demonstrated by an Australian football team that utilizes the technology: the ability to predict injuries weeks before they occur and the opportunity to implement action plans for injury avoidance. For the Ravens, reducing the injury rate can mean the difference between winning and losing.

See injuries before they occur.
DARI identifies potential injuries two weeks before they might otherwise occur, giving athletes and trainers a head start on avoidance.

TIME IS MONEY

Athletes are pulled in a host of different directions by multiple demands, all of them important to the athlete's performance. Time to evaluate an athlete is a critical element. A trainer, physician or physical therapist may have as little as five to ten minutes of interaction per athlete.

Rather than spending all of that time conducting a subjective analysis of the athlete, DARI gives pro sports teams the ability to capture a full body evaluation in less than five minutes. A full team overview, complete with scores for individual athletes, is available the same day.

DARI allows athletes and those who work with them the ability to use their time to craft solutions for better performance.
